BAKTOL® POWDER (Poudre)

Potassium metabisulphite powder (E224)

CHARACTERISTICS

BAKTOL® Powder comes as fine, white granules that are easy to handle and dissolve, with the following characteristics:

- Purity: 99% minimum
- Chemical formula: $K_2S_2O_5$
- Molecular weight: 222 g/mol
- Concentration in SO_2 : 58% minimum

OENOLOGICAL PROPERTIES

- **Antiseptic**

At high doses, it inhibits all types of fermentation in musts and wines.

At low doses, it naturally selects microorganisms (yeasts and bacteria) that best promote smooth vinification.

- **Antioxidant**

By combining with the oxygen available in musts and wines, it avoids browning processes in musts and changes in tint in wines.

In must, it inhibits tyrosinase, which causes oxidation.

DOSAGE

Dosage varies considerably depending on vinification methods and input times. It is preferable to seek an oenologist's advice.

BAKTOL® Powder provides half its weight as pure SO_2 . Simply weigh out the required quantity.

INSTRUCTIONS FOR USE

It is always preferable to previously dissolve **BAKTOL® Powder** in a little wine or must. This enables it to be more evenly distributed in the mass to be treated, especially for crushed grapes.

400 g of **BAKTOL® Powder** can be dissolved per litre of cold water, which is equivalent to 200 g of available SO_2 for sulfiting wine.

Precautions for use:

BAKTOL® Powder has the characteristic odour of SO_2 and while this odour is mild, it is recommended to avoid breathing it in.

Product for oenological and specifically professional use.

Use in accordance with current regulations.
