

LES ESSENTIELS

NUTRIMENT S

Activator combining thiamine and ammonium sulfate

CHARACTERISTICS

In order to grow, micro-organisms need nutrients (water and carbon provided mainly by sugars, amino acids and certain minerals), growth factors, especially for vitamin yeasts (thiamine, biotin, pantothenic acid, etc.), as well as specific physico-chemical conditions (temperature, pH, aeration).

APPLICATIONS

In all cases, **NUTRIMENT S** enhances the fermentability of musts.

Like all living organisms, yeast needs nitrogen to grow.

Alcoholic fermentation is faster and more complete with NUTRIMENT S, and is accompanied by a lower production of volatile acidity. This effect is particularly noticeable in the case of musts rich in sugar, or from botrytised harvests.

- **In the case of spoiled harvests:**

Rapid fermentation enables faster separation of the juice from the stalks, minimising the risk of oxidation and maximising amounts of aromatic substances.

- **To resume fermentation:**

In the event of sluggish or stuck fermentation, the addition of Nutriment S with finishing yeasts is highly recommended.

DOSAGE

Maximum authorised dose: 17 g/hL

INSTRUCTIONS FOR USE

Dissolve in 10 times its weight of water or must.

Precautions for use:

Product for oenological and specifically professional use.

Use in accordance with current regulations.

PACKAGING

1 kg and 5 kg.

STORAGE

Store unopened, sealed packaging away from light in a dry, odour-free environment. Once opened use rapidly.
